HWAM 2620c

29-1657 UK

COLLECTION 2021/2022

At HWAM, our talented organization works every day to produce unique and aesthetic products in collaboration with hand-picked quality suppliers to the delight of consumers all over the world. Our wood-burning stoves and stove inserts are manufactured at our factory in Hørning, south of Aarhus, in the heart of Denmark. Here functional design solutions are developed and produced at our modern factory hand in hand with traditional craftsmanship, which ultimately creates the perfect product.

At HWAM, we focus on climate-friendly and CO₂-neutral combustion. We do this through our unique combustion systems which are built into all our products enabling the wood's energy to be utilized in the best and cleanest way possible. All our products are also developed in close collaboration with designers who have a deep understanding of our profession and who not only encapsulate current trends but also embrace the perfect and unique design that classics are made of.

In 2019, HWAM A/S enters a partnership with French SEGUIN Group, as co-owner. HWAM A/S remains under Danish management with Stefan Hvam Pedersen as the CEO. Today, HWAM A/S has a dealer network covering all of Europe. Add to this, importers in a wide range of countries.

Enjoy the new product catalogue. On behalf of us all at Team HWAM.

Stefan Hvam Pedersen
CEO, HWAM A/S

HWAM 3740m, style handle, black

Protect the environment, save money and enjoy a high level of comfort thanks to HWAM® SmartControl™

Efficient combustion and easy operation thanks to HWAM® Autopilot™ which is standard in all HWAM models

Danish and international design

Manufactured in Denmark for more than 45 years

HWAM's unique airwash system ensures correct air circulation and keeps the glass clean

Convenience and ease of operation thanks to HWAM® SmartControl™ or HWAM® Autopilot™

A unique closing mechanism seals the door tightly for optimum combustion

Optional fresh air kit to connect to external air

Convection distributes the heat in the room

Heat storage helps prolong the warmth in your room even after the fire has gone out

WHY CHOOSE HWAM?

Most wood-burning stoves probably look more or less the same to you. So, why choose a HWAM? HWAM has designed and produced wood-burning stoves in Denmark for more than 45 years. It has been an exciting and insightful journey and we have learnt so much from listening to our customers and partners. We test our wood-burning stoves thoroughly and we always give high priority to design, functionality and quality.

Design, functionality and sustainability are key factors in our philosophy. Based on these values, we have developed two intelligent systems for regulating the supply of air thereby optimising the combustion, the mechanical **HWAM® Autopilot™**, as well as the electronic **HWAM® SmartControl™**. You can read more about these two systems from page 6-9 or on our website, www.hwam.com.

When you choose a HWAM wood-burning stove you can design it to your taste and needs. On page 14 you can learn more about the various options and get some inspiration. No matter which model you end up with we promise you to deliver a Danish-produced wood-burning stove of the highest quality. As all of our wood-burning stoves are produced at our factory in Denmark we control the entire process from the very first design drawing till the wood-burning stove is ready to leave the factory.

PROTECT THE ENVIRONMENT

WE DO...

“We constantly strive to make our wood-burning stoves and stove inserts more efficient and environmentally friendly. Therefore, our products are put through a series of comprehensive tests to determine how they perform in different situations. We do this to ensure that the wood-burning stoves and the stove inserts comply with both our own stringent environmental requirements in every conceivable situation. We do this to ensure the best possible experience for the user and to protect the environment.”

Nature needs protecting - now more than ever. You can make a big difference and leave a greener footprint for the enjoyment of future generations by introducing small changes in your life. Start by choosing a HWAM wood-burning stove.

A HWAM wood-burning stove holds a little secret. A secret which has been kept for 30-odd years. It is a heat-sensitive spring at the core of your HWAM wood-burning stove by the name of HWAM® Autopilot™.

Once you have lit the stove, HWAM® Autopilot™ takes over and automatically regulates the air supply. As the heat rises and falls in the combustion chamber, the heat-sensitive spring will cause the three mechanical air dampers to open or close depending on the current temperature in the combustion chamber. In effect, optimum combustion without you having to do anything. Easy, convenient, eco-friendly and economical.

HWAM® Autopilot™ allows you to choose the temperature level that suits you. Simply set the regulation to your requirements. A HWAM wood-burning stove means:

- better comfort
- 40% savings on firewood consumption*
- reduced particle emission*

HWAM® Autopilot™ is standard in all HWAM wood-burning stoves and is included in the price.

WOULD YOU LIKE AN **INTELLIGENT** WOOD-BURNING STOVE?

HWAM® SmartControl™ adjusts the essential air supply in your wood-burning stove. All you have to do is light the fire and add new firewood. HWAM® SmartControl™ will do the rest. You will get a message when it is time to add more firewood.

Once the wood-burning stove has been lit, HWAM® SmartControl™ adjusts the air supply through three independent air inlets. The temperature and the amount of oxygen in the flue gas are constantly measured by a temperature meter and an oxygen meter, respectively, and sent on to the control system. Based on this data, HWAM® SmartControl™ regulates the air inlets with precision to the second, ensuring that the right amount of air is supplied to the combustion chamber, at the right place and at the right time. A win-win for your firewood consumption and the environment!

HWAM® SmartControl™ comes with a thermostat, which allows you to choose the temperature level that suits you. The temperature level is set via an app on your phone.

When you choose a HWAM wood-burning stove* with HWAM® SmartControl™ you get:

- A future-proof wood-burning stove whose system soft-ware is continuously updated
- 50% saving on your firewood consumption**
- Greater comfort thanks to smart control
- A highly eco-friendly wood-burning stove ensuring optimal, clean combustion
- A wood-burning stove recommended for low-energy houses/pressure-tested houses and new houses in general

With HWAM® SmartControl™ you get a wood-burning stove that is not only economical and eco-friendly; it also gives you much more time to enjoy.

PROTECT THE ENVIRONMENT

WHAT TO CONSIDER BEFORE CHOOSING A WOOD-BURNING STOVE

Taste and style vary from person to person, so here we will let you be the expert. However, before you buy a wood-burning stove, there are a few things worth considering.

Why do you want a wood-burning stove?

Is it because you live in a cold house? Do you want to save money on the heating bill, or is it for the sake of the cosy atmosphere?

How many m² are to be heated?

It is important that the heat emitted by the wood-burning stove is adequate for the m² to be warmed up. As a rule of thumb, you can assume that approximately 1 kW is required to heat 20 m², provided the house is reasonably well insulated. Ask your HWAM dealer for more information.

How easy should it be?

All HWAM stoves are equipped with HWAM® Autopilot™ as standard, an automatic air control that ensures good combustion. If you would like it as easy as it comes, then choose a model with built-in HWAM® SmartControl™. The only thing you need to do is light the fire as usual, set the desired temperature via an app on your smartphone and then enjoy the heat and the dancing flames. You will receive a message through your app when it is time to add new firewood.

Requirements for the location?

Are there any special constructions in your home that render installation of the wood-burning stove impossible in certain areas? Is there anything you should be aware of in relation to combustible material?

Requirements for new houses?

If you live in a newly built house, you may need to install a fresh air system in your wood-burning stove, as newly built houses are very well insulated, and the air circulating in the house is often reused in the ventilation system. This means that there will not be enough air in the house for neither lighting up nor combustion.

Requirements for chimney & smoke pipe

The chimney must be of a sufficient height to enable an adequate draft and to prevent smoke problems. The wood-burning stove requires a draft of at least 12 Pa. The chimney must have a minimum opening equivalent to Ø 15 cm. The chimney opening should always be at least the size of the outlet socket of the stove. The chimney must have an easily accessible soot door. Smoke pipe and chimney must always be suitable for a stove connection. Ask your HWAM dealer for more information.

Requirements for floors and/or walls

You should check whether the floor on which your wood-burning stove will be standing is stable enough to carry the weight, or whether the wall which your stove or insert will hang on/be built into is able to withstand weight. We recommend that you consult a specialist. If the wood-burning stove is placed on a flammable floor, make sure to protect the floor from embers falling out. You can choose tiles, sheet metal or a glass plate depending on what style you prefer. See more about distances to combustible material on page 78.

Ask an expert

Once you have considered some of these questions, it will hopefully be easier for you to make a decision. If you are still in doubt, you can always visit your local HWAM retailer for a talk about the right choice for you.

**YOUR

IS CO₂-NEUTRAL**

HWAM 4660C

HEAT STORAGE & STONE CLADDING

When you choose a wood-burning stove with stone cladding, you get a stove with a unique appearance, since every stone has its own distinctive feature. Besides, there are other tangible benefits.

We know of heat storage from masonry stoves, where the heat is stored in the stones surrounding the combustion chamber. Heat storage in a wood-burning stove is the stove's ability to quickly and comfortably distribute the convection heat in the room combined with the masonry stove's capacity for heat storage.

Selected HWAM models are designed with a heat storage compartment that can be filled with stones with a special capacity for storing the heat from the wood-burning stove and then slowly give it off to the room. This means that you can enjoy the heat long after the fire has gone out.

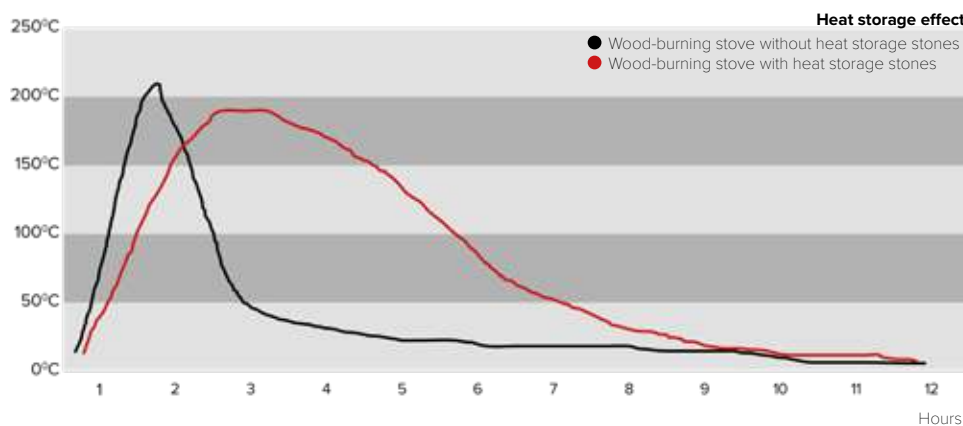

If you want a wood-burning stove that stores the heat, you can choose one of the following HWAM models with stone cladding: 3520, 3640, 3660, 4240, 4340, 4540, 4560, 4640 and 4660.

If you would like a stove with a heat storage compartment, you can choose between these HWAM models: 3130, 3520, 3650, 3660, 3740, 4150, 4160, 4550, 4560, 4660 and 5530.

Below is an illustration of a wood-burning stove with and without heat-storing stones.

Heat-storing stones

A wood-burning stove with heat storing stone cladding means more continuous heat in the room with the same amount of firewood.

HWAM 4660m

HWAM 3760m, style handle

Height

70 cm - 168,5 cm.

Flue outlet

Top or back.
5530 top, back or side outlet

Type

Wall mounted, pedestal, floor model, plinth, insert, modular.

Door

Most models are available with two types of doors, a classic cast iron door (c) or a modern glass door (m). Our inserts are available with a left or right hinged door.

Handle

All HWAM models are available with a traditional handle. The series 3100, 3500 og 3700 are available with the handles below.

Style handle

Style handle, Traditional handle black

Colours*

Our m-models (glass door) are available in black and grey. Our c-models (cast iron door) are available in black and grey. Our models with stone cladding are available in black and grey. Selected series are available in white.

* With the exception of HWAM 5530 and HWAM 140/55.

DESIGN YOUR OWN HWAM WOOD-BURNING STOVE

Once you have decided which model best suits your needs, it is time to choose the perfect look. There are many ways to tailor your stove to exactly fit your style and home. What do you prefer? A classic look? A raw look? Or a modern look?

Under our technical specifications from page 53, you can see all our models. Take a look at the possibilities and find inspiration on how to put together your very own HWAM model.

Natural stone cladding

A wood-burning stove with natural stone cladding has two functions. Visually, the stone creates a unique appearance, with no piece of stone being the same. Purely functionally, the heat-storing capacity of the stone extends the heat effect.

Soapstone

Tobacco

Function

All HWAM wood-burning stoves are equipped with HWAM® Autopilot™ as standard to help you achieve good combustion. As the temperature rises and falls in the combustion chamber, a bimetallic spring will expand and contract, thereby regulating the supply of air. When the fire is dying out, the damper will automatically open again, and you can add firewood or let the fire die out.

Would you like it as easy as it comes? Then you should choose a model with built-in HWAM® SmartControl™. HWAM® SmartControl™ is electronic control of the air for optimum combustion. The only thing you need to do is light the fire as usual, set the temperature via an app on your smartphone and enjoy the heat and the dancing flames. You will receive a message through the app when it is time to add more firewood.

MEET OUR DESIGNERS

When design meets function something unique is created. It is difficult to describe in words. It must be seen, touched and experienced. HWAM has a long tradition of working together with talented Danish and international designers. The combination of their sense of aesthetics and detail and the know-how of our experts results in functional handcraft.

The starting point for the development of any HWAM wood-burning stove is optimal combustion and an aesthetically pleasing appearance

Sørig & Jacobsen

The designer team Sørig & Jacobsen consists of Henrik Sørig and Tobias Jacobsen.

Their design tells a story and plays on the harmony between function, form, and technique. They have a keen eye for details and work with simplicity of appearance and design. Good design is when the stove matches the user's needs perfectly.

Heiko Heybey

German furniture architect Heiko Heybey has dedicated himself to creating modern and everyday-friendly designs.

In his quest to link commercial design with quality craftsmanship, Heiko Heybey has designed countless beautiful wood-burning stoves.

Anders C. FASTERHOLDT

Anders C. FASTERHOLDT always focuses on the function of the wood-burning stove, the needs of the stove-owner and the aesthetic sensuality. He creates stoves and solutions that work in everyday life.

As a designer, he strives to remove all unnecessary noise so that the design is as clean as possible.

DANISH DESIGN

MANUFACTURED IN DENMARK

DANISH QUALITY

A HWAM WOOD-BURNING STOVE IS BORN

From idea to final product

From idea to wood-burning stove

We believe that innovation and development go hand in hand with production. Take production out of the equation, and you lose the practical knowledge that makes it possible to translate design ideas into real stoves that meet aesthetic as well as functional needs and demands. This is why all our wood-burning stoves and inserts are manufactured at our factory in Hørning and have been for more than 45 years. The process starts with our talented designers whom we have worked with for years. When their ideas and visions have manifested themselves in sketches, they open a dialogue with our designers and sales management for the development of a wood-burning stove or an insert that satisfies the demands of our customers.

Prototypes & tests

When the design drawings are in place, the process moves into our development workshop at the factory in Hørning, where prototypes of the new stove will be prepared. The stove is then tested by our combustion experts to ensure that it meets the stringent requirements for a wood-burning stove. When the wood-burning stove or the insert burns as it should, it is sent for external testing in Denmark and abroad for final approval at a certified test institute.

First production

Once the stove has been approved in relation to combustion and safety requirements, it will be put into production. Each single HWAM wood-burning stove is produced to order at our modern factory, and the processes are implemented and supervised by our highly skilled employees. This ensures a stable flow, better control of production and thus a final stove of outstanding quality.

The devil is in the detail

Our goal is to develop wood-burning stoves and inserts with a unique design which appeal to the quality conscious consumer. And this is where the small details make the difference. One of the features that makes a HWAM stove so unique is a bimetallic spring, HWAM® Autopilot™, which all our stoves are equipped with. It automatically controls the all-important combustion air inside the wood-burning stove, unlike other wood-burning stoves, where you must adjust the air in order to obtain good combustion. Our electronic combustion system, HWAM® SmartControl™, which is available for most HWAM models, takes the technology a step further. Read more on page 8.

We have made it easy for you. This way, you can concentrate on enjoying the warmth and the beautiful enchanting fire.

A bimetallic spring, which automatically controls the combustion air inside the wood-burning stove, is standard in all HWAM wood-burning stoves and inserts.

SMALL, EFFICIENT & SOPHISTICATED

HWAM 2600 Design by Sørig & Jacobsen

With its practical size, the HWAM 2600-series fits into small and large homes alike and creates a cosy gathering point for you and the ones you hold dear. The HWAM 2600-series is characterised by its beautiful rounded front, which, in combination with very simple lines, lends the stove a timeless expression. A great little wood-burning stove that fits into most homes. Let the flames seduce you and create a pleasant atmosphere in your home. For more information about the HWAM 2600-series, see page 52.

POWERFUL & EYE-CATCHING

HWAM 3100 Design by Anders C. Fasterholdt

A timeless wood-burning stove that helps create a nice cosy corner in your home. The HWAM 3100-series is characterised by its beautiful elliptical shape that makes it the centrepiece of the room. The perfectly curved glass window offers an impressive view of the flames and acts as a powerful eye-catcher. It does not always have to be four-square. ELEGANT BEAUTY WITH CLEAN LINES

HWAM 3500 Design by Anders C. Fasterholdt

The HWAM 3500-series is an invitation to peace and quiet and a break from the hustle and bustle of everyday life. A wood-burning stove with character whose sculptural idiom contributes to a classic expression in your home. The round forms give the stove character and allow it to be part of the decor, even when not in use. For more information about the HWAM 3500-series, see page 56.

STYLISH DESIGN

HWAM 3700 Design by Sørig & Jacobsen

With the HWAM 3700 series, the designers have created a slender wood-burning stove, whose design language is reminiscent of straight columns. The range is available with the classic HWAM handle or with a new type of handle integrated into the design to offer a calm and unbroken look. At the top of the wood-burning stove, the designers have created a convection groove which emphasises the sleek shape of the stove and completes the stylish look. If the flue pipe is to be connected from the rear of the wood-burning stove, the stove comes with a solid top plate that supports the stylish look. For more information on the HWAM 3700-series, see page 60.

SLENDER & CYLINDRICAL

HWAM 4100 Design by Heiko Heybey

The HWAM 4100-series was inspired by the most complete of all forms: the circle. By choice, the design is as pure as possible, as evidenced by the simple joints and the slim handle. A solid top plate gives the stove its finishing touch. The cylindrical shape of the wood-burning stove fits well into a corner or up against a straight wall. For more information on the HWAM 4100-series, see page 62.

A MODERN INTERPRETATION OF CLASSIC DESIGN

HWAM 4300 Design by Heiko Heybey

The HWAM 4300-series is a modern interpretation of the classic wood-burning stoves of the 70s with a clear division between wood magazine, combustion chamber and top plate but a more experimental approach to the side elements. The 4300-series presents itself beautifully with its slender oval profile, a wide combustion chamber that can take firewood of up to 33 cm in length, which ensures efficient heating of large rooms. The frame less glass door gives the series a light and modern look and makes it fit for most homes. For more information on the HWAM 4300-serien, see page 66.

SLIGHTLY MORE EDGE

HWAM 4500 Design by Sørig & Jacobsen

Decorate your home with HWAM 4520, which oozes elegance and exclusivity, and let its attractive design contribute to a timeless Scandinavian look. This sophisticated wood-burning stove offers you an impressive view of the flames. A timeless wood-burning stove with excellent and clean combustion. For more information about the HWAM 4500-series, see page 67.

WIDE & BREATHTAKING

HWAM 4600 Design by Sørig & Jacobsen

HWAM 4660 has a simple, architectural design with unique details-. The extra-wide HWAM 4600 models allow an even better view of the flames. The extra spacious combustion chamber allows firewood of up to 49 cm in length. Sit back and enjoy the flames for even longer. For more information about the HWAM 4600-series, see page 70.

A MODULAR STOVE TO YOUR TASTE

HWAM 5500 Design by Sørig & Jacobsen

Do you prefer one, two, three modules? Would you prefer just having the wood-burning stove module? Whatever the number of modules, the result is always the same: a stylish wood-burning stove of a modern Danish design. HWAM 5530 is the name of our new modular wood-burning stove. Whether you choose one or several modules, the stove will always appear as one integrated unit. The design is streamlined and functional. The sharp angles tell the story of Danish design and attention to detail. The functions are unmistakable. Keep your firewood in the modules or take a break and enjoy the heat. Add a stylish cushion on top of the side module to enjoy the heat and the crackling sounds close up. Choose high and/or low modules, with or without drawers. You decide! For more information on HWAM 5530, see page 72.

HWAM Classic 4 with wood store and baking oven

WE LOVE THE CLASSICS

HWAM Classic 4 Design by Anders C. Fasterholdt

HWAM Classic 4 is a classic stove that has been very popular ever since it saw the light of day more than 30 years ago. The HWAM Classic 4 series is available in different versions. The basic stove has hobs for heating food. You can add a handy baking oven, that makes it possible to utilize the heat to bake pizzas, bread, and pastries. Enjoy the smell of freshly baked bread spreading to the house while you enjoy a quiet moment in front of the dancing flames. By adding a plinth, you can store your wood underneath the wood-burning stove – decorative and practical. As something new we can offer fresh air system for this oven. Who could ask for more? For more information about the HWAM Classic-series, see page 74.

AN INTEGRATED PART OF YOUR HOME

HWAM I 40/55 Design by Sørig & Jacobsen

Simple elegance, clean lines and a minimalist design characterise our new insert, HWAM I 40/55. The wide glass offers a spectacular view of the dancing flames and plays a prominent role by virtue of the simple design. This model is available with a classic cast iron door or a modern glass door, and you can choose between a right hinged or a left hinged door. HWAM I 40/55 has been designed to allow for very easy servicing. The wide combustion chamber is mounted on a rotary arm, which means that the stove can easily be swivelled into the room to allow easy access to all its parts. When you buy a HWAM I 40/55 insert, you have the option of buying various types of customised frames. A frame without bent edges is both stylish and eye-catching. For more information about HWAM I 40/55, see page 75.

HWAM ACCESSORIES

Complete your HWAM wood-burning stove with accessories. A beautiful floor plate to match your choice of model perfectly or a practical and sculptural way of storing your firewood? Prolong the warmth of the fire with heat storing stones or have fresh air supplied from the outside for better combustion and a better indoor climate.

Firewood box

A HWAM Firewood box is a practical and robust helper when you transport firewood to your wood-burning stove. Thanks to its large wheels and a sturdy handle, it is easy to push the box, even when filled with wood. The design is elegant and matches all our stoves.

Firewood bucket

A classic and robust firewood bucket that will look decorative next to your wood-burning stove.

Wall-mounted firewood storage

If you want to keep your floor space, our round firewood storage solution will do the trick. Available in various sizes.

Floor plates

A tailor-made floor plate is available for most of our wood-burning stove models. We have developed floor plates in steel and glass adapted to the shape of your wood-burning stove. Aesthetically, the plates will match any interior design style, and they are easy to remove for cleaning purposes.

Heat storing stone

Selected HWAM models are designed with a heat storage compartment that can be filled with heat storing stone. This type of stone has a special ability to store the heat from the stove and slowly release it into the room. This means that you can enjoy the heat long after the fire has gone out. The models appear from the product overview on page 76.

Fresh air system

Many new or newly renovated houses are so well isolated that they may prevent the supply of combustion air from the room. As a consequence, the wood-burning stove will be lacking air. This may be remedied by connecting a fresh-air system to your wood-burning stove.

Wall-mounted firewood storage

Available in grey or black.
Ø 42,2 cm. D 27 or 35 cm
Ø 60 cm. D 27 or 35 cm

SmartBackup

The battery module, SmartBackup, is purchased separately and is easy to install on the HWAM SmartControl™ system. We have developed this so we can offer you perfect security in relation to our technological system. We want it to be as easy and secure as possible for you to take advantage of technological combustion control in your HWAM stove. The battery means you are not dependent on the power supply, if there is a power outage.

Combustion air system

HWAM 3660c

HWAM 3660m, white

HWAM 3660m with soapstone cladding

All drawings: The measurements for the flue outlet and fresh air connection are to the centre of the hole.

HWAM 3740

Technical data

Capacity	2-7 kW
Nominal heat output	4.5 kW
Smoke outlet	Ø 150 mm
Net efficiency Autopilot™/ SmartControl™	78.1/83.4%
Chimney draught, min. (recommended)	12 Pa
Energy efficiency class Autopilot™/SmartControl™	A/A+

Weight

Weight HWAM 3740c/3740m	104/101 kg
-------------------------	------------

Measurements

Width of combustion chamber	33.0 cm
Connection from floor with Autopilot™, top	94.8 cm
Connection from floor with SmartControl™, top	97.5 cm

* Only HWAM® SmartControl™

Variants

- Autopilot™ or SmartControl™
- Classic door (c) or modern door (m)
- Open or closed top (top outlet or back outlet)
- Traditional handle (stainless steel) or style handle (stainless steel or black)
- HWAM 3740c/3740m are available in black and grey

Accessories

Combustion air system, rear/bottom

Approvals and registrations

- EN 13240

1) HWAM® SmartControl™: See drawing.

Distance to combustible materials

- insulated flue gas pipe/uninsulated flue gas pipe

	1. Behind Cm. min	2. Side Cm. min.	3. Distance to furnishing in front Cm. min.	4. Above combustible floor Cm. min.	May be installed on a 12 mm thick hearth on combustible floor (UK)	5. Distance to combustible wall, corner location Cm. min	6. Distance to combustible wall, corner location Cm. min.

(1) Thickness of insulation, behind/under/over.

(2) Thickness of insulation.

(3) **Important!** All dimensions in connection with corner installation are only recommendations. Contact your HETAS Engineer for a clarification.

(4) This distance requirement is met when the stove is mounted on a plinth or a Pedestal.

(5) With insulated flue pipe

(6) This distance requirement is met when the stove is mounted on a high plinth.

(7) Distance to non combustible insulation against combustible wall.

(8) Can be installed on a 12 mm hearth, when mounted on a 3 cm plinth.

(9) Can be installed on a 12 mm hearth when mounted on a low plinth.

Distance to combustible materials

- insulated flue gas pipe/uninsulated flue gas pipe

	1. Behind Cm. min.	2. Side Cm. min.	3. Distance to furnishing in front Cm. min.	4. Above combustible floor Cm. min.	May be installed on a 12 mm thick hearth on combustible floor (UK)	5. Distance to combustible wall, corner location Cm. min.	6. Distance to combustible wall, corner location Cm. min.
